

Employ AI. Don't operate it.

A managed AI workforce for regulated businesses.

THE PROBLEM

AI can't be trusted with regulated work.

- A frontier model can read a passport, draft a filing, answer a customer. It can also invent a detail with total confidence, and you'd only find out when a regulator did.
- So the businesses that most need an AI employee can't safely adopt one: data can't leave the building, every action needs a receipt, one wrong move costs more than the automation saves.

The blocker isn't the model. It's everything around it: the operation, the controls, the accountability.

WHY NOW

The model is ready. The operation around it isn't.

- ✓ Frontier models are finally capable enough to run real back-office operations.
- ✓ But raw AI is unaccountable, so regulated businesses can't touch it.
- ✓ Regulation is rising: the EU STR Regulation puts the same compliance burden on millions of operators.
- ✓ And nobody runs AI for these businesses as a managed, accountable service.

THE SOLUTION

A managed AI workforce.

YOU · THE BUSINESS

Employ the role

- Hire a role
- Approve what carries real-world impact
- Own the audit trail

OBRA · WE OPERATE

Run the worker

- Build the workflows
- Deploy to your machine, remotely
- Run + monitor the fleet, keep it working

You employ the role. We operate the worker — on your machine, stopping at your yes.

Obra

TRUST

Accountable by construction.

Not promised in a policy. Built into how each employee is made.

Local-first

Runs on your machine, under your own Claude key.

Two reads must agree

Every critical fact verified by two independent passes.

Typed actions

Autonomous, gated, or forbidden. It can't promote itself.

Human approval

A named person approves anything with real-world impact.

Audit you own

Hash-chained, tamper-evident, yours to export.

We run the staff, not your data

We operate the fleet on status signals only.

Obra

BUSINESS MODEL

Two models. One engine.

OBRA STANDARD · SMB

Product

- Runs on our pre-built workflows + connectors
- Flat per-seat subscription, clean margin
- The wedge and the proof

OBRA ENTERPRISE · CUSTOM

Managed service

- Private networks, custom connectors, complex workflows
- Audit → one-time build fee → monthly retainer
- The revenue engine

The flywheel: **every custom build becomes a standard capability.** Services compound the product, and the customer's own AI key keeps our margin clean.

UNIT ECONOMICS

Capital-efficient by design.

~83%

contribution margin per
Standard seat

~18

enterprise contracts cover
all costs

€0

our inference cost —
customer's own key

18mo

to operational profit, base
plan

Enterprise is priced per engagement: a scoped audit, a one-time build fee, then a monthly retainer. Standard adds clean per-seat margin. The round funds the team that reaches it.

Obra

TRACTION

Live, with real hosts, on the hardest job to trust.

10

pilots · 3 regulated
verticals

16

reservations run end-to-
end

0

support calls beyond setup

SIBA

mandatory filing,
automated

Eight hospitality, one accounting, one legal. The 16 end-to-end runs are the hospitality proof; the control plane that runs the fleet remotely is already built.

Start in Portugal. Expand across regulated Europe.

~100,000 AL properties ·
Portugal

SIBA mandatory
today

Millions of hosts · EU

EU STR Regulation · in force May 2026

Accounting · Legal · Clinics · Logistics

every regulated back office

WHY WE WIN

The model is the commodity. The operation is the moat.

- Our moat is service + operations + trust + vertical depth + local execution. Not the model, which we treat as swappable.
- Roughly 70% of the substrate is already built: the engine, the trust layer, and the control plane that runs the fleet.
- Local-first, operator-blind execution is structurally hard for cloud-native incumbents to copy.

WHY NOT A GENERAL AGENT

A managed workforce, not a chatbot you operate.

GENERAL AGENT

- You operate it
- No accountability or audit
- Runs in a vendor's cloud
- Horizontal, not regulated

OBRA

- We operate it for you
- Accountable, audited, gated
- Runs on your machine
- Built for the regulated vertical

Built on Anthropic, not against it. The better the model, the better for us.

TEAM

Operators who ship, backed by a bench.

Francisco Ribeiro

FOUNDER · CEO

In 2017 exited Lethean, a decentralized VPN he rebuilt to a \$30M valuation. Self-taught, certified through Anthropic's Claude Partner Network. Built most of the Obra substrate; now leads go-to-market.

Liliana Cipriano

CO-FOUNDER

Reception and property operations at a major Portuguese resort — the regulated world Obra automates. Runs the first vertical and the live pilots with real short-term-rental hosts.

ADVISORS & INCOMING TEAM · UNDER NDA

CTO — AI security & systems. **Security advisor** — cybersecurity leader. **Finance & strategy** — economist, joining 2027.

Joining as they exit current commitments. Names under NDA.

THE ASK

Raising €1M pre-seed.

- Use of funds: a delivery and growth team — engineering, design, BD, marketing — so the founders lead instead of build.
- 18 months of runway to a first cohort of enterprise contracts and operational profitability, even on a conservative ramp.
- Two-model go-to-market: Standard proves and lands; Enterprise managed-services scales the revenue.
- Inference is the customer's own cost, so the round funds team and go-to-market, not compute.

The managed AI workforce for every regulated business.

Employ AI. Don't operate it.
