

The harness for trusted AI employees.

Infrastructure for local-first, audit-owned AI in regulated business. First vertical live: Portugal's short-term rentals.

PRE-SEED · 2026 · €150K-250K

EXTERNAL CODE AND ARCHITECTURE REVIEW · 2026

Frontier AI is powerful. You still can't put it in charge of regulated work.

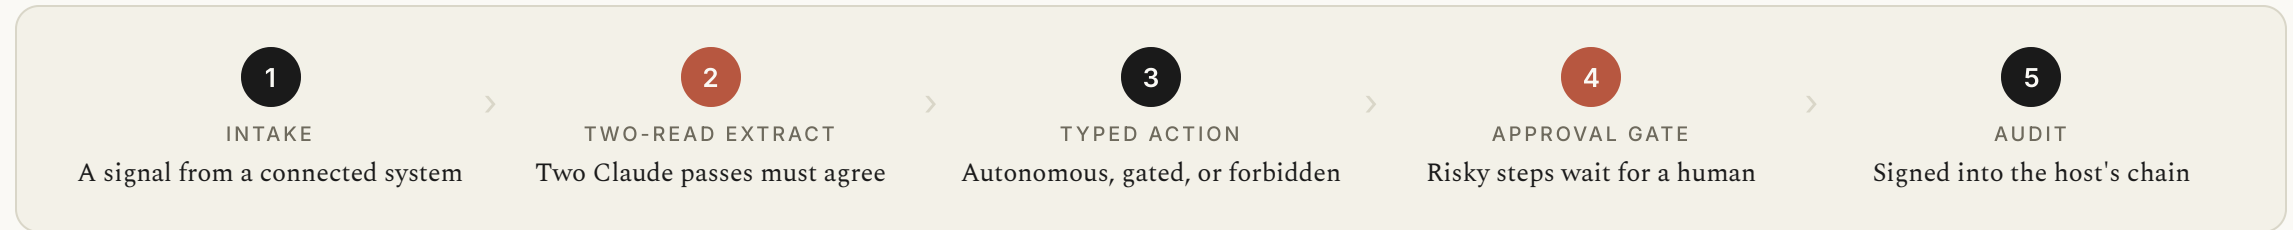

- A model can draft a filing or read a passport. It can also invent one, and you won't know until a regulator does. Confidence is not correctness.
- Regulated businesses run on constraints a chatbot ignores: data that cannot leave the premises, every action needing a receipt, one wrong move costing more than the work saved.
- So the operations that most need an AI employee, the compliant, deadline-driven, audit-heavy ones, are exactly the ones that cannot safely adopt one.
- The blocker is not the model. It is everything around the model: the control, the verification, the trust, and the proof.

Obra is the harness that makes a frontier model safe to put to work.

A harness around Claude. The model supplies the intelligence. The harness supplies the trust, the control, and the proof. Four parts, built once, reused by every vertical:

How the harness runs any job.

A normal AI agent

- × One read, no second opinion. A confident mistake ships.
- × Takes any action it decides to. No hard limits.
- × Runs in someone's cloud. Your data leaves the building, no receipt.

Obra's harness

- ✓ Two independent reads must agree before anything moves.
- ✓ Every action typed. Forbidden stays forbidden, risky waits for you.
- ✓ Runs on the user's machine. Data never leaves, every step in an audit they own.

Trust, by construction.

Most AI agents can't be trusted with regulated work. Obra can, because trust is built into the architecture, not promised in a policy. Six properties, enforced structurally.

Local-first, your key

Obra runs on your own machine under your own Claude key. Raw data never leaves your control.

Two reads must agree

Critical extractions, a passport or an invoice total, are read by two independent Claude passes. They must agree before the work moves. If they don't, it stops and comes to you.

Three-gate trust

Risky actions pass three gates: structured reasoning, an adversarial second read by a separate Claude, then your human approval.

Typed actions

Every action is typed Autonomous, Gated, or Forbidden. The model cannot bypass a tier. Forbidden stays forbidden.

Audit you own

Every action is hash-chained to the one before it. Tamper-evident, host-owned, exportable the moment a regulator or accountant asks.

Operator-blind

We structurally cannot see your data or your actions. Not a promise, a property of how the system is built.

We proved the harness on the hardest job to trust an agent with.

16

COMPLETE WORKFLOWS

Booking email to SIBA to guest comms to owner report. No manual steps.

10

LIVE PILOTS

8 AL hosts, 1 accountant, 1 solicitor. Free pre-launch cohort. First paid conversions targeted Q3 2026.

1

MANAGEMENT AGENCY

One pilot runs multiple properties, a different LTV conversation from single-host users.

0

SUPPORT CALLS NEEDED

No pilot has needed intervention beyond initial setup.

Independently reviewed by an external security researcher: B+ overall, A on security, called "world-class for the stage."

EXTERNAL CODE AND ARCHITECTURE REVIEW · JUNE 2026

Hospitality is the first pack. The engine runs them all.

VERTICAL PACKS — WHAT THE CUSTOMER BUYS

LIVE NOW

Hospitality

SIBA filing, guest comms, owner reports.
10 pilots running.

NEXT

Accounting

AL bookkeeping prepared by Obra, signed
by a certified accountant.

ROADMAP

Legal & clinics

Any regulated SMB with deadline-driven,
auditable admin.

ROADMAP

Property mgmt

Portfolios across owners, the same
employee at agency scale.

THE OBRA HARNESS · SHARED BY EVERY PACK

Typed skills and connectors · workflow runtime · trust-enforcement layer (two-read agreement, typed-action tiers, three-gate approval) · host-owned audit chain. Built once, reused by every vertical.

THE REAL PRODUCT

We did not build a hospitality app. We built the harness that makes a trusted AI employee possible in regulated work: connectors, runtime, structural trust, and an audit the customer owns. Hospitality is the first vertical we pointed it at. An independent review found most of the codebase is reusable harness, not hospitality-specific, so each new pack changes the connectors and the workflow, not the foundation.

Every regulated SMB needs a trusted AI employee. Hospitality is the way in.

PORTUGAL · BEACHHEAD

~100k

Registered AL properties. Every one files SIBA or risks fines. Obra enters here.

- Every EU state runs a SIBA-shaped regime: Spain's SES Hospedajes, Italy's Alloggiati Web, and the rest under the 2024 Regulation. Each is a country pack on the same engine.

EUROPE · SAME REGIME

~5M

STR hosts across 27 EU member states. The EU STR Regulation (2024/1028) extends the same compliance requirement to all of them.

- The same engine serves other regulated SMBs, accountants and clinics among them, who also need auditable work and data that never leaves the building. Hospitality is the wedge, not the ceiling.

Everyone gets the same model. The engine is the moat.

THE ENGINE, NOT THE MODEL

Every frontier upgrade reaches everyone at once, so the model is not the edge. Obra's edge is the system around it: the connector framework, the workflow runtime, the trust gates, and the owned audit chain that decide what the model may touch and prove what it did. A competitor can't match that by switching to a better model. We run on the best model and own everything around it.

Compliance-led wedge

SIBA is mandatory, not a nice-to-have a host can churn from. Airbnb and property software assume the host handles compliance. Obra handles it. Once the workflow sticks, retention follows.

TRUST CLOUD INCUMBENTS CAN'T COPY

Operator-blind by construction: local-first, dual reads, human approval, an owned audit chain. A cloud product structurally can't match this under EU privacy law. Published as an open reference pack on the agentskills.io standard.

Switching cost

Obra owns the workflows, the guest history, host preferences, and the property profile. The longer it works, the more it costs to leave.

Distribution built in

Accountants, solicitors, and agencies are already pilot users. Each serves dozens of hosts, distribution that needed no sales effort.

Anthropic alignment

Two axes of growth. One engine.

AXIS 1 · ACROSS COUNTRIES

Portugal today, the EU next

SIBA now. Spain, Italy, and France as the EU STR Regulation lands. Each country is a compliance pack, not a rebuild, because the obligation is the same shape everywhere.

AXIS 2 · ACROSS VERTICALS

Hospitality today, regulated SMBs next

Accounting, legal, clinics, property management. Each is a vertical pack on the same engine, sharing the trust model and the audit chain.

WHY ONE ENGINE REACHES A MARKET THIS WIDE

Only the connectors and the pack change. The engine, the trust model, the audit, and the approval gates stay the same. That is why pack two ships in weeks, not years, and why Obra scales horizontally, on every host's own machine, with no central bottleneck. The gate on growth is our capacity to onboard, which is exactly what this raise funds.

From €50/month. Cheaper than the admin it replaces.

STARTER · SINGLE HOST

€50_{/mo}

Single AL property. Full workflow automation: SIBA, guest comms, owner updates.

SCALE · PORTFOLIO

€150_{/mo}

Multiple properties. All connectors. Designed for the active investor or small portfolio manager.

AGENCY · CUSTOM

Custom

Management agencies running 10 to 30+ properties. Per-property or flat retainer. One contract covers the portfolio.

- A part-time admin in Portugal costs €600 to €800/month. Obra starts at €50. The comparison makes itself.
- COGS is Anthropic API usage. It scales with volume, not headcount.
- Missing a SIBA filing risks a fine. Obra removes that risk on every booking, the willingness to pay is built into the law.
- €1M ARR is about 1,700 hosts at base rate, or far fewer through agency contracts.

Growth pulled by compliance and the professional channel.

PLAN · BASE CASE

2026 · PROVE

10 *paying hosts*

Convert the pilot cohort. Focus on product-market fit in Portugal, every workflow boringly reliable.

2027 · MULTIPLY

~300 *hosts*

The professional channel does the selling. Agencies and accountants bring portfolios, not single hosts. Around €20 to €30k MRR.

2028 · EXPAND

~1,700 *hosts*

€1M ARR at base rate, fewer with agency contracts. First country pack beyond Portugal.

AMBITION

2,000+ properties under management by the end of 2026. Obra runs locally on every host's machine, so it scales horizontally with no central bottleneck. The product is ready for that volume; the gate is our capacity to onboard, which is exactly what this raise funds. We do not control how fast the market moves, but Obra is built for it when it does.

WHY IT COMPOUNDS

The deadline does the selling. Every booking restarts the compliance clock, so usage is recurring by construction, and every host onboarded through an agency arrives with the agency's own switching cost attached. The base case is the conservative plan, not a forecast.

Lean burn, long runway, milestones before money.

RUNWAY ON €200K

SCENARIO	BURN / MO	RUNWAY
Lean	€8k	~24 months
Base	€10k	~20 months
Stretch	€14k	~14 months

Stretch adds a first engineering hire and faster country-pack work. Founders on minimal salaries; COGS is Anthropic API usage, scaling only with paying hosts.

MILESTONES BEFORE THE NEXT RAISE

MILESTONE 1 · Q3 2026

First revenue

Pilot cohort converts to paid. Pricing validated against the part-time-admin benchmark.

MILESTONE 2 · Q4 2026

10 paying hosts

Portugal go-to-market executing. First agency contract signed on custom terms.

MILESTONE 3 · 2027

Path to €50k MRR

Professional channel scaled. Seed round raised on evidence, not promises.

€150k-250k

PRE-SEED · 2026

- Harden the harness: the trust layer, the deploy safety net, backup and recovery
- Ship the second vertical pack, the proof the harness repeats
- Execute Portugal go-to-market: first paying hosts, path to €50k MRR
- Lay the country-pack groundwork for EU expansion
